# Watershed

## Note

Please note that these papers are generally reports of work done on projects the primary purpose of which was to deliver results on the ground and under stringent reporting deadlines.

Although every effort is made by Development Alternatives staff to ensure the accuracy and rigour of their analysis and recommendations, they were intended to be distributed rapidly and while they have received careful editing, many of them have not been formally peer-reviewed to the standards required for academic research.

FOR COPIES, PLEASE WRITE TO:

**Title:** Economics of Land Degradation: Evaluating the Impact of Land Remediation through the Lenses of Natural Capital and SDGs in the Bundelkhand Region in Madhya Pradesh, India

**Year of Publication:** 2020

**Pages:** 111

**Keywords:** Watershed, Agriculture, Livelihood

**Abstract:** This report encapsulates the costs and benefits of the programmes implemented by Development Alternatives by applying the ELD methodology in three districts of Bundelkhand. The assessments looked into natural, social and human capital based on multiple indicators. The report highlights the differences in performances of different forms of capitals across intervention and control villages for the selected period (2013- 2018). The findings reflected that land-use changes have taken place in the study area during this period. Major improvements in agriculture were reported.

**Title:** Land Remediation for Achieving

**Year of Publication:** 2020

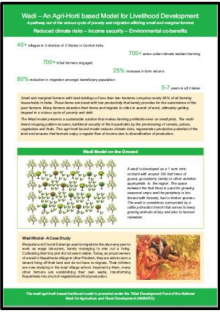

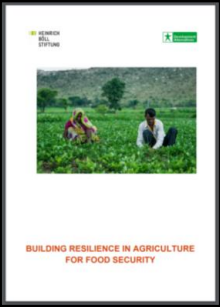

**Pages:** 16

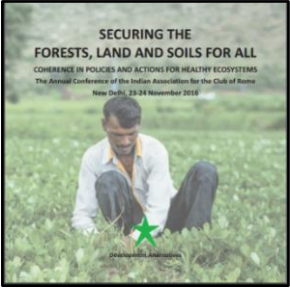

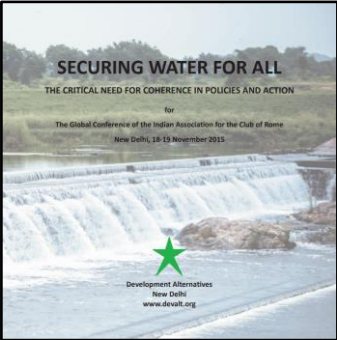

**Keywords:** Watershed, Agriculture, Livelihood

**Abstract:** Development Alternatives has initiated several interventions for land remediation in the semi-arid, erratic rainfall prone and economically backward Bundelkhand region in Madhya Pradesh. This report encapsulates the costs and benefits of the implemented programmes by applying an extended Economics of Land Degradation methodology in three districts of – Datia, Shivpuri and Niwari, of the region. The findings reflect the land-use changes in the districts. Major improvements in agriculture were reported.

	<p><b>Title:</b> Bundelkhand: From Water Stressed to Water Secure..through integrated water management</p> <p><b>Year of Publication:</b> 2020</p> <p><b>Pages:</b> 2</p> <p><b>Keywords:</b> Watershed, Agriculture, Livelihood</p> <p><b>Abstract:</b> This Factsheet analyses the mismanagement of water and highlights the challenges and opportunities for creating solutions for the grave water woes in Bundelkhand. It also focuses on Development Alternatives' unique approach for water management, which is sustainable and inclusive - ensuring 'water for all, and always'.</p> <p><b>URL:</b> <a href="https://bit.ly/3EFZcJn">https://bit.ly/3EFZcJn</a></p>
	<p><b>Title:</b> ShubhKal building resilience for a brighter tomorrow</p> <p><b>Year of Publication:</b> 2019</p> <p><b>Pages:</b> 52</p> <p><b>Keywords:</b> Watershed, Resilience, Agriculture, Livelihood</p> <p><b>Abstract:</b> This book is an ode to the indomitable spirit of the people of Bundelkhand. The vignettes in it offer but a glimmer of the transformations that are possible. We have developed an array of eco-solutions and systems to address the issues. But, the sheer scale and complexity of the challenge in Bundelkhand demands that the ideas, energies and efforts of all actors are in synergy to realise a shared vision of a resilient future for Bundelkhand. The time for action is now, and if we all come together, ShubhKal – a better tomorrow – will be ours.</p> <p><b>URL:</b> <a href="https://bit.ly/3IWPedN">https://bit.ly/3IWPedN</a></p>
	<p><b>Title:</b> Integrated Watershed Management for Water, Food and Livelihood Security in Rural India</p> <p><b>Year of Publication:</b> 2016</p> <p><b>Pages:</b> 2</p> <p><b>Keywords:</b> Watershed, Livelihood</p> <p><b>Abstract:</b> This Capitalisation Document gives a snapshot of implementing the Integrated Watershed Management Model at the grassroots.</p> <p><b>URL:</b> <a href="https://bit.ly/2YuN6QI">https://bit.ly/2YuN6QI</a></p>

	<p><b>Title:</b> Wadi – An Agri-Horti Based Model for Livelihood Development: Capitalisation Document</p> <p><b>Year of Publication:</b> 2016</p> <p><b>Pages:</b> 2</p> <p><b>Keywords:</b> Livelihood, Agriculture</p> <p><b>Abstract:</b> This Capitalisation Document gives a snapshot of the Wadi model, including the design, economics and co-benefits to the environment.</p> <p><b>URL:</b> <a href="https://bit.ly/3DEZ24j">https://bit.ly/3DEZ24j</a></p>
	<p><b>Title:</b> Wadi - An Agro-Forestry Based Livelihood Development Model: Capitalisation Document</p> <p><b>Year of Publication:</b> 2016</p> <p><b>Pages:</b> 2</p> <p><b>Keywords:</b> Watershed, Livelihood</p> <p><b>Abstract:</b> This Capitalisation Document gives a snapshot of implementing the Integrated Watershed Management Model at the grassroots.</p> <p><b>URL:</b> <a href="https://bit.ly/3ByLCF5">https://bit.ly/3ByLCF5</a></p>
	<p><b>Title:</b> Building Resilience in Agriculture for Food Security</p> <p><b>Year of Publication:</b> 2016</p> <p><b>Pages:</b> 46</p> <p><b>Keywords:</b> Agriculture, Livelihood, Food Security</p> <p><b>Abstract:</b> This document is an outcome of a project titled 'Building Resilience in Agriculture for Food Security, funded by Heinrich Boll Foundation, for the economic development, social empowerment and environment management of our society.</p> <p><b>URL:</b> <a href="https://bit.ly/3jzYGDY">https://bit.ly/3jzYGDY</a></p>

	<p><b>Title:</b> Securing the Forests, Land and Soils for all</p> <p><b>Year of Publication:</b> 2016</p> <p><b>Pages:</b> 36</p> <p><b>Keywords:</b> Livelihood, Agriculture, Natural Resource</p> <p><b>Abstract:</b> Life on Earth depends on many resources and a vast number of interactions and flows among them. Critical among these are oxygen, carbon and nitrogen from the atmosphere, light and heat from the sun, food from terrestrial and ocean biomes, not to mention myriads of complex physical, chemical and biological cycles and geological processes. In this annual conference of CoR-India, DA attempts to explore the technological, economic and policy choices we can make that converge with goals of sustainability.</p> <p><b>URL:</b> <a href="https://bit.ly/3oeD0QP">https://bit.ly/3oeD0QP</a></p>
	<p><b>Title:</b> Securing Water for All</p> <p><b>Year of Publication:</b> 2015</p> <p><b>Pages:</b> 28</p> <p><b>Keywords:</b> Livelihood, Agriculture, Natural Resource</p> <p><b>Abstract:</b> Water is a fundamental human need and a critical national asset. India's huge and growing population is putting a severe strain on its water resources. Water, along with food, energy and land, forms a critical part of the 'new security agenda'. 'Policy Coherence Analysis' attempts to integrate the economic, social, environmental and governance dimensions of sustainable development at all stages of domestic and international policy. This booklet explores the nature of the institutions of the State, of business and of civil society that is necessary - even if not entirely sufficient - to serve the economic, ecological and societal, and above all ethical, purpose of speedily eliminating water insecurity from India.</p> <p><b>URL:</b> <a href="https://bit.ly/3nXC2lr">https://bit.ly/3nXC2lr</a></p>

	<p><b>Title:</b> Impact of Climate Change on Water Resources in Madhya Pradesh</p> <p><b>Year of Publication:</b> 2015</p> <p><b>Pages:</b> 40</p> <p><b>Keywords:</b> Biodiversity, Climate Change, Water Resources</p> <p><b>Abstract:</b> This report highlights the impact of climate change on water resources in Madhya Pradesh.</p> <p><b>URL:</b> <a href="https://bit.ly/3kAV2Ks">https://bit.ly/3kAV2Ks</a></p>
	<p><b>Title:</b> Impact of Climate Change on Forests and Biodiversity in Madhya Pradesh</p> <p><b>Year of Publication:</b> 2015</p> <p><b>Pages:</b> 44</p> <p><b>Keywords:</b> Biodiversity, Climate Change</p> <p><b>Abstract:</b> This report is a part of the DFID project 'Strengthening Performance Management in Government' (SPMG). It highlights the impact of climate change on forests and biodiversity in Madhya Pradesh.</p> <p><b>URL:</b> <a href="http://devalt.org/images/L2_ProjectPdfs/(15)ForestsDiversity.pdf?Oid=150">http://devalt.org/images/L2_ProjectPdfs/(15)ForestsDiversity.pdf?Oid=150</a></p>
	<p><b>Title:</b> Vulnerability Assessment for UR River Watershed, Tikamgarh District</p> <p><b>Year of Publication:</b> 2015</p> <p><b>Pages:</b> 40</p> <p><b>Keywords:</b> Climate Change, Agriculture, Watershed</p> <p><b>Abstract:</b> Totodrought-prone assess the livelihood related vulnerabilities and derive the strategies and solutions for mitigating the impacts of climate change, a vulnerability assessment was conducted in the proposed Watershed area (Ur River Watershed). This area falls in the Tikamgarh district of the Bundelkhand region.</p> <p><b>URL:</b> <a href="https://bit.ly/2WkK3JQ">https://bit.ly/2WkK3JQ</a></p>

	<p><b>Title:</b> WOTR'S Wasundhra Approach To Climate Change adaptation In Agriculture</p> <p><b>Year of Publication:</b> 2015</p> <p><b>Pages:</b> 6</p> <p><b>Keywords:</b> Climate Change, Agriculture</p> <p><b>Abstract:</b> This case study focuses on how the problems in the agricultural community such as lack of water, irregular patterns of weather and lack of livelihood security were overcome by the interventions by Watershed Organisation Trust (WOTR). This initiative was started under the Climate Change Adaptation (CCA) Project across 25 villages in the Sangamner and Akole blocks in the Ahmednagar district of Maharashtra. The success of the approach demonstrates the importance of putting the community at the centre of development while investing in their capacity building to drive sustainable and equitable development.</p>
	<p><b>Title:</b> Mangrove Conservation and Management: Enhancing Livelihood Opportunities for Mangrove Dependent Communities in Bhitarkanika</p> <p><b>Year of Publication:</b> 2013</p> <p><b>Pages:</b> 17</p> <p><b>Keywords:</b> Climate Change, Livelihood, Forest</p> <p><b>Abstract:</b> This baseline assessment is based on two villages of the Bhitarkanika Wildlife Sanctuary and includes information on the socio-economic status of the respondents, assessment of natural resources and livelihoods in the area and information on climate change and vulnerability in the area.</p> <p><b>URL:</b> <a href="https://bit.ly/2JR8Zl7">https://bit.ly/2JR8Zl7</a></p>
	<p><b>Title:</b> Watershed management sees farmers through drought in the semi-arid plains of India</p> <p><b>Year of Publication:</b> 2013</p> <p><b>Pages:</b> 5</p> <p><b>Keywords:</b> Agriculture, FPO</p> <p><b>Abstract:</b> For Ram Singh from Chopra village in Bundelkhand, water means money. However, Mr Singh is not selling mineral water. He is simply a farmer trying to survive in this drought-prone area where over 70% of the population relies on rain-fed agriculture. For these communities, a deficient monsoon can have disastrous effects - destroying crops, leaving families without food and forcing people to migrate to cities in search of work.</p>

	<p><b>Title:</b> Agro met information helps Indian farmers in the face of climate uncertainties</p> <p><b>Year of Publication:</b> 2013</p> <p><b>Pages:</b> 5</p> <p><b>Keywords:</b> Agriculture, FPO</p> <p><b>Abstract:</b> For generations, Indian farmers have used traditional knowledge like assessing plant, animal and insect behaviour to understand weather patterns in order to make decisions about cropping and irrigation cycles. However, in recent years, farmers have been seeking scientific weather forecasts as opposed to just relying on traditional weather predictions to deal with increasing climate uncertainties.</p>
	<p><b>Title:</b> Training Need Analysis (TNA) of UR River basin, Tikamgarh</p> <p><b>Year of Publication:</b> 2013</p> <p><b>Pages:</b> 16</p> <p><b>Keywords:</b> Livelihood, Climate, Water, Resource, Management</p> <p><b>Abstract:</b> This study was conducted to identify the Vikas Mitras and training needs of Vikas Mitras in the field of IWM, agriculture and allied areas. Ten Vikas mitras from the two block viz. Tikamgarh and Baldevgarh were selected using the disproportionate stratified random sampling method and were personally interviewed on a three-point continuum as most needed, needed and least needed.</p>
	<p><b>Title:</b> Resource Vulnerability of Semi-Arid Bundelkhand and Recommendations for Policy Response- a brief analysis</p> <p><b>Year of Publication:</b> 2011</p> <p><b>Pages:</b> 38</p> <p><b>Keywords:</b> Livelihood, Habitat, Water, Management</p> <p><b>Abstract:</b> The present paper attempts to highlight key issues and challenges relating to climate change adaptation in arid and semi-arid regions. It discusses processes that can result in sustainable use of water resources especially in relation to food security in the semi-arid region of Bundelkhand.</p> <p><b>URL:</b> <a href="https://www.devalt.org/images/L2_ProjectPdfs/SustainableCivil.pdf">https://www.devalt.org/images/L2_ProjectPdfs/SustainableCivil.pdf</a></p>

	<p><b>Title:</b> Application of Remote sensing and Geographic Information System (GIS) in Watershed management</p> <p><b>Year of Publication:</b> 2003</p> <p><b>Pages:</b> 16</p> <p><b>Keywords:</b> Agriculture, FPO</p> <p><b>Abstract:</b> This paper seeks to demonstrate the usefulness of GIS technology in conjunction with Remote Sensing in watershed management. The watershed approach is more national because the resources of land and water have optimum interaction and system effect when developed on a watershed basis all over India.</p>
	<p><b>Title:</b> Check Dam Assessment Study</p> <p><b>Year of Publication:</b> 1999</p> <p><b>Pages:</b> 98</p> <p><b>Keywords:</b> Agriculture, FPO</p> <p><b>Abstract:</b> The purpose of the study was not only to determine the actual benefits that accrued to project-affected people and gather feedback on the appropriateness of the check dams as an intervention but also to design and field test an evaluation methodology that could be adapted and applied DA's others sustainable livelihood projects. The study also gathered information on community problems, maternal and child health matters etc.</p>
	<p><b>Title:</b> Impact of Air pollution on Agriculture in India</p> <p><b>Year of Publication:</b> 1997</p> <p><b>Pages:</b> 44</p> <p><b>Keywords:</b> Agriculture, Air, Pollution, Crops</p> <p><b>Abstract:</b> This case study focuses on collating the agriculture data for the subsistence crops, cash crops, export and commercial crops and horticulture crops of the following states: Punjab, Haryana, Uttar Pradesh, Maharashtra and Gujarat.</p>

The very base of production is under great stress in many parts of our country due to service biotic pressure and ever-intensifying development.</p>

**Title:** Application of Remote sensing and Geographic Information System (GIS) in Watershed management

**Author:** Anand Kumar

**Year of Publication:** 2003

**Pages:** 16

**Keywords:** Agriculture, FPO

**Abstract:** This paper seeks to demonstrate the usefulness of GIS technology in conjunction with Remote Sensing in watershed management. The watershed approach is more rational because the resources of land and water have optimum interaction and synergistic effect when developed on watershed basis. Remote Sensing data together with satellite and air-borne land use and water resources inventory at local, regional and global scales. Remote Sensing provides a means to facilitate assessment, development of land and water resources, ecological habitat and improve the socio-economic conditions of the watershed watershed communities. The information derived from satellite data, topographical maps and other measurements, data used to assess the status of the watershed. GIS enables efficient and effective manipulation of spatial and non-spatial data for reliable management of watershed and develop alternative development model for the benefit of local people. It also facilitates monitoring in terms of local specific activities by integrating spatial and non-spatial data such as thematic layers and non-spatial data. The spatial database generated will also help the authorities in planning and change monitoring and activity in understanding the effect of developmental activities undertaken by incorporating the data derived from the repetitive coverage of the satellite.

**Title:** Minimal irrigation on small agricultural watersheds with red soils in the semi-arid tropics of Andhra Pradesh, India

**Author:** K. Vijayalakshmi, K. P. R. Vittal and U. M. B. Rao

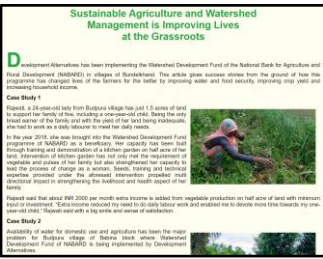

**Published by:** Science Direct

**Year of Publication:** 1989

**Keywords:** Soil, Irrigation, Moisture, Water

**Abstract:** Part of the runoff water from sloping red soils of the Andhra Pradesh region was stored and used for local irrigation of several crops over several years, during which rainfall varied widely in the cropping period. This type of utilisation of harvested water is unique in the semi-arid tropics. Judicious application of small amounts of water through alternate central furrows to wet the root zone during a stress period increased yields significantly. Response to irrigation decreased with increasing soil moisture in the root zone. Irrigation was beneficial in both sub-normal and normal rainfall conditions during the cropping period. With above normal rainfall there was hardly any need for irrigation. According to rainfall probability, expected yield increases of sorghum and castorbean over time were on average 251 and 523 kg/ha with irrigation of only 15 and 50 mm, respectively.

**Title:** Sustainable Agriculture and Watershed Management is Improving Lives at the Grassroots

**Author:** Rishabh Singh

**Year of Publication:** 2020

**Keywords:** Water, Agriculture, Rural, Development

 <p><b>Communication Facilitating Natural Resource Conservation</b></p> <p><b>W</b>atershed is a geo-hydrological unit draining to a common point to a system of drains. Watershed development refers to the conservation, regeneration and the judicious use of all the natural resources (particulars land, water, vegetation, animals and human development) within the watershed area.</p> <p>Integrated development approach is based on participatory planning which follows a bottom-up approach for developing an integrated plan for each watershed. Watershed development is a process of local resource mobilization for strengthening of local level institutions. Different social groups and institutional arrangements have varying levels of access to the existing institutions. Forming a group to provide a more effective access than do these ones are more powerful in order to obtain external support for greater resource capacity to make available. Therefore, an analysis of the nature of institutional linkages and access for different social groups becomes critical.</p> <p>Development Alternatives has acted as the resource agency in Madhya Pradesh for access and effective implementation of watershed management. In the watershed, participatory watershed development organizations, village, group, and farmer's groups are formed. A strong sense of ownership is created by the beneficiaries of such projects. Effective communication plays a very critical role in the implementation of such watershed programmes.</p> <ul style="list-style-type: none"> <li>• Implementation of watershed management programmes. Development Alternatives created both such as IIC training to create awareness regarding the watershed management. Village Committees are established. Various other village level committees are formed. Watershed development is implemented in watershed management and the implementation of the same. Communication needs identified in order to establish linkages to facilitate a smooth functioning of the watershed management.</li> <li>• Implementation of soil and moisture conservation activity. Watershed management is not just about constructing a check dam or other water harvesting structures. Local knowledge of the community members on traditional methods of soil conservation and water conservation are used in the watershed programmes. Training and capacity building become also an essential activity. Watershed development is implemented through IIC based watershed management committees. To meet communication needs, regular meetings to meet communication among various stakeholders such as members of the watershed committees, local government officials, etc.</li> <li>• Long term sustainability. The implementation agencies cannot ensure the long term sustainability since the project is over. Development Alternatives has been working with the watershed committees to ensure the long term management of the watershed.</li> </ul>	<p><b>Title:</b> Communication Facilitating Natural Resource Conservation</p> <p><b>Authors:</b> Rishabh Singh</p> <p><b>Year of Publication:</b> 2019</p> <p><b>Keywords:</b> Water, Conservation, Land, Vegetation</p> <p><b>Abstract:</b> Watershed is a geo-hydrological unit draining to a common point by a system of drains. This newsletter focuses on Agroforestry based Integrated Watershed Development which has multiple benefits such as enhanced crop intensification, yield enhancement, enhanced groundwater, reduced siltation, increased economic water productivity, ecosystem services and assured income and livelihoods.</p> <p><b>URL:</b> <a href="http://www.devalt.org/newsletter/dec16/dec16.htm">http://www.devalt.org/newsletter/dec16/dec16.htm</a></p>
 <p><b>Natural Resource Management through Watershed Development</b></p> <p><b>A</b>griculture is the foundation of the rural economy of Bundelkhand. An extremely drought prone region in Central India, with 50% of the population being dependent on agriculture as their primary livelihood. However, agricultural systems in Bundelkhand are largely rain fed and dependent on erratic rainfall. Such regions are inherently resource rich, but require judicious use of natural resources to ensure sustainable livelihoods. Watershed development approach is based on participatory planning and resource mobilization. The approach is based on the concept of watershed management. The approach is based on the concept of watershed management. The approach is based on the concept of watershed management.</p> <p>The key action areas of the model watershed programme are described in the following sections:</p> <p><b>Biorecovery Enhancement as a Co-Benefit of Agro-Forestry</b></p> <p>Watershed development is a process of local resource mobilization for strengthening of local level institutions. Different social groups and institutional arrangements have varying levels of access to the existing institutions. Forming a group to provide a more effective access than do these ones are more powerful in order to obtain external support for greater resource capacity to make available. Therefore, an analysis of the nature of institutional linkages and access for different social groups becomes critical.</p> <p><b>Farmer Production for Enhancing Livelihood based Livelihoods</b></p> <p>Watershed development is a process of local resource mobilization for strengthening of local level institutions. Different social groups and institutional arrangements have varying levels of access to the existing institutions. Forming a group to provide a more effective access than do these ones are more powerful in order to obtain external support for greater resource capacity to make available. Therefore, an analysis of the nature of institutional linkages and access for different social groups becomes critical.</p> <p><b>Crop Diversification in Farming Systems</b></p> <p>Crop diversification is being promoted as a means to better productivity and income and improved crop resilience. Both mixed cropping and intercropping provide more than one crop in a field. This helps in risk reduction and increases the productivity of the land.</p>	<p><b>Title:</b> Natural Resource Management through Watershed Development</p> <p><b>Authors:</b> Dr Krishna Murari and Mohua Tripathy</p> <p><b>Year of Publication:</b> 2015</p> <p><b>Keywords:</b> Resource, Water, Agriculture</p> <p><b>Abstract:</b> The Model Watershed Programme has emerged as a site of learning for integrated watershed management and sustainable agri-production systems in Bundelkhand. It presents a strong case for replication across the region through the concerted efforts of stakeholders and actors engaged in processes of local development</p> <p><b>URL:</b> <a href="https://www.devalt.org/newsletter/Jun15/of_1.htm">https://www.devalt.org/newsletter/Jun15/of_1.htm</a></p>

Pandey, Mayukh Hajra</p> <p><b>Year of Publication:</b> 2014</p> <p><b>Keywords:</b> Carbon, Water, Agriculture, Climate</p> <p><b>Abstract:</b> The agriculture sector currently accounts for about 17% of the carbon footprint of India and the promotion of agri-Horti and agroforestry based models such as the <i>wadi</i> can go a long way in reducing the carbon intensity of the sector. Conventional agriculture has been witnessing depleting productivity levels as a result of a combination of factors that include the adoption of unsustainable land, water and nutrient management practices, diminishing farm sizes and farm investment and increasing climate change impacts.</p> <p><b>URL:</b> <a href="https://www.devalt.org/newsletter/jul14/jul14.htm">https://www.devalt.org/newsletter/jul14/jul14.htm</a></p>

**Title:** Watershed Management helps convert Waste Land into Productive Land

**Author:** Sanghamitra Misra

**Year of Publication:** 2014

**Keywords:** Water, Farmer, Agriculture

**Abstract:** In 2010, a watershed development project was sanctioned for the micro-watershed of Datia district under the Rajiv Gandhi Watershed Mission (RGWM). This programme involves setting up institutional mechanisms for community-led watershed management, delivers solutions focusing on sustainable agriculture, efficient resource use, farmers' training for productivity enhancement and livelihood diversification

**Title:** Enriching Biodiversity through Watershed Management

**Author:** Dr Krishna Murari

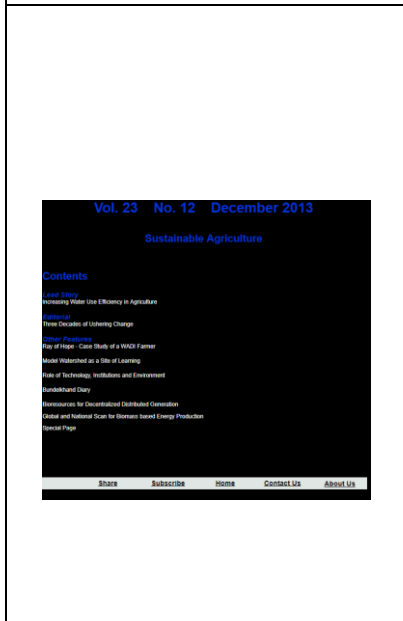

**Magazine:** Development Alternatives

**Year of Publication:** 2014

**Keywords:** Soil, Water, Farming, Agriculture

**Abstract:** Over the last 30 years, Development Alternatives has rejuvenated more than 25,000 hectares of land in Bundelkhand through its integrated soil and water conservation programmes. Construction of more than 150 water harvesting structures such as farm ponds, stop dams, gabion dams, check dams and loose boulders have helped increase groundwater levels in this drought-prone region and has impacted growth in agriculture.

**Title:** Sustainable Agriculture

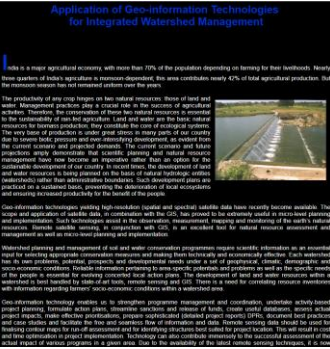

**Authors:** Dr Krishna Murari, Prince Vishal Swadeshi, Shiv Bhushan Pandey, Mayukh Hajra, Mahua Tripathy, Saumya Kumar

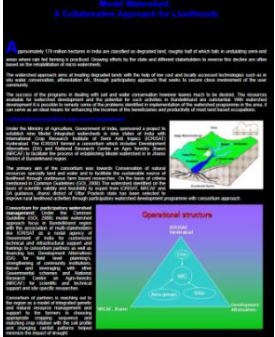

**Year of Publication:** 2013

**Keywords:** Sustainable, Agriculture

**Abstract:** In a situation of growing water scarcity and rising demands for non-agricultural uses of water, reassessment of sectoral allocations of water becomes inevitable. Water scarcity which already affects one in three persons on earth is set to increase in magnitude and scope as the global population grows and the increasing affluence drives up water demand. The newsletter also focuses on watershed technologies and the use of bioresources.

 <p><b>Participatory Planning and Sustainable Development: Role of the Watershed Committees</b></p> <p><b>Development</b></p> <p>More than 200 million of the rural poor in India live in rain fed agricultural areas. A large proportion of them live in chronic poverty. Despite the abundant supply of water, there is a serious shortage of water resources, especially in the semi-arid regions. The Integrated Watershed Management Programme (IWMP) has been selected as the flagship programme of the Government of India. The Ministry of Agriculture, Government of India, has been selected as the nodal agency for the implementation of the programme. The Ministry of Agriculture, Government of India, has been selected as the nodal agency for the implementation of the programme. The Ministry of Agriculture, Government of India, has been selected as the nodal agency for the implementation of the programme.</p> <p><b>Participatory model of watershed management</b></p> <p>The IWMP operates in a participatory mode. It is run through a three-tier structure. At the top level, the National River Development and Control Directorate (NRDCD) is the nodal agency. At the middle level, the State River Development and Control Directorate (SRDCD) is the nodal agency. At the bottom level, the Watershed Development Committee (WDC) is the nodal agency. The WDC is a community-based organization, which is formed by the people of the watershed. The WDC is responsible for the implementation of the programme at the watershed level. The WDC is a community-based organization, which is formed by the people of the watershed. The WDC is responsible for the implementation of the programme at the watershed level.</p>	<p><b>Title:</b> Participatory Planning and Sustainable Development: Role of the Watershed Committees</p> <p><b>Authors:</b> Dr Krishna Murari</p> <p><b>Year of Publication:</b> 2013</p> <p><b>Keywords:</b> Sustainable, Agriculture</p> <p><b>Abstract:</b> Over much of India’s history, water has been managed very successfully as a local resource. Unfortunately, the logic of the so-called ‘economies of scale’ has led to a quest for larger projects and more centralised management systems resulting in many cases in an inequitable distribution of the resource. On the other hand, Watershed Committees created by villagers have succeeded to a great extent in ensuring the sustainability of the participatory programmes.</p> <p><b>URL:</b> <a href="https://www.devalt.org/newsletter/may13/of_2.htm">https://www.devalt.org/newsletter/may13/of_2.htm</a></p>
 <p><b>Community Watershed Development: Rehabilitating Degraded Lands and Creating Sustainable Employment</b></p> <p><b>Development</b></p> <p>Community participation is a key to the success of any watershed development project. The success of any watershed development project depends on the active participation of the people of the watershed. There is a need for correlating resource inventories with information regarding farmers’ socio-economic conditions within a watershed area</p> <p><b>URL:</b> <a href="https://www.devalt.org/newsletter/feb12/lead.htm">https://www.devalt.org/newsletter/feb12/lead.htm</a></p>

	<p><b>Title</b> Water, Drought and Livelihoods in Bundelkhand</p> <p><b>Author:</b> Dr Shailendra Nath Pandey, Dr Naresh Sharma, Sonal Kulshreshtha, Dr Naresh Sharma, Aurobindo Mahato, Garima Chaturvedi, Arobindo Mahato, Garima Chaturvedi</p> <p><b>Year of Publication:</b> 2011</p> <p><b>Keywords:</b> Resource, Water, Community</p> <p><b>Abstract:</b> This newsletter comprises various articles on the Bundelkhand region of India - its degrading natural resource base, low per capita income, increasing human pressures and extreme weather conditions of drought. It highlights various interventions of Development Alternatives to manage resources, protect the vulnerability of communities and climate and enhance their livelihoods. Some of these are watershed development model, deep irrigation technology, farmers' adaptation cluster, resource-efficient farming equipment, WADI model and oil expelling unit.</p> <p><b>URL:</b> <a href="http://www.devalt.org/newsletter/jan11/jan11.htm">http://www.devalt.org/newsletter/jan11/jan11.htm</a></p>
	<p><b>Title:</b> Model Watershed: A Collaborative Approach for Livelihoods</p> <p><b>Author:</b> S N Pandey and Naresh Sharma</p> <p><b>Year of Publication:</b> 2010</p> <p><b>Keywords:</b> Water, Livelihood, Community</p> <p><b>Abstract:</b> This article discusses how the watershed approach has manifold benefits - reversing the extensive degradation of land, conserving natural resources, strengthening community and facilitating a sustainable source of enhanced livelihoods. It describes the processes of implementation, operation, monitoring, evaluation and scaling up of the Model Watershed to be established by Development Alternatives in the Bundelkhand region of Central India.</p> <p><b>URL:</b> <a href="http://www.devalt.org/newsletter/sep10/of_4.htm">http://www.devalt.org/newsletter/sep10/of_4.htm</a></p>

	<p><b>Title:</b> Watershed Management Through Stakeholders' Participation</p> <p><b>Author:</b> Dr Shailendra Nath Pandey</p> <p><b>Year of Publication:</b> 2009</p> <p><b>Keywords:</b> Rain, Water, Environment, Biomass</p> <p><b>Abstract:</b> Approximately 170 million hectares in India are classified as degraded land, roughly half of which falls in undulating semi-arid areas where rain-fed farming is practised. Growing efforts by the state and different kinds of stakeholders to reverse this decline are often based on the rehabilitation of micro watersheds. This aims to establish an enabling environment for the integrated use, regulation and treatment of water and land resources of a watershed-based ecosystem to accomplish resource conservation and biomass production objectives.</p> <p><b>URL:</b> <a href="https://www.devaltd.org/newsletter/jul09/lead.htm">https://www.devaltd.org/newsletter/jul09/lead.htm</a></p>
	<p><b>Title:</b> Las Gaviotas - Renaissance of the Rainforest</p> <p><b>Author:</b> Usha Srinivasan</p> <p><b>Year of Publication:</b> 2009</p> <p><b>Keywords:</b> Community, Water, Political</p> <p><b>Abstract:</b> Imagine miles and miles of desolate savannah in eastern Colombia, without a tree or bird or child insight, a veritable no-man's land. For Paolo Lugari, this was the perfect place to implement a vision: if a sustainable community could be created in such adverse environmental, social and political conditions, it could be done anywhere on the planet. Las Gaviotas has done just that, and much more.</p> <p><b>URL:</b> <a href="https://www.devaltd.org/newsletter/jun09/of_2.htm">https://www.devaltd.org/newsletter/jun09/of_2.htm</a></p>
	<p><b>Title:</b> Rainwater Harvesting: An Approach Towards Sustainable Water</p> <p><b>Author:</b> Sonal Kulshreshtha</p> <p><b>Year of Publication:</b> 2008</p> <p><b>Keywords:</b> Water, Management, Harvesting</p> <p><b>Abstract:</b> The Bundelkhand region, which can be easily characterised by the ill effects of poor water management, has suffered a lot due to poor practices to manage water in the last 6-7 decades. At one time, this region was a pioneer in terms of water harvesting based on today's principles of watershed management practices.</p> <p><b>URL:</b> <a href="https://www.devaltd.org/newsletter/sep08/of_2.htm">https://www.devaltd.org/newsletter/sep08/of_2.htm</a></p>

	<p><b>Title:</b> Watershed Management</p> <p><b>Author:</b> Anand Kumar</p> <p><b>Year of Publication:</b> 2003</p> <p><b>Keywords:</b> Land, Water, Development</p> <p><b>Abstract:</b> This article focuses on the development of land and water resources is being planned based on natural hydrological entities (like watersheds), rather than administrative boundaries. Such development plans are sustainable.</p> <p><b>URL:</b> <a href="https://www.devalt.org/newsletter/may03/of_1.htm">https://www.devalt.org/newsletter/may03/of_1.htm</a></p>
	<p><b>Title:</b> Watershed Approach: A Livelihood Option?</p> <p><b>Author:</b> P S Chandrasekhra Rao</p> <p><b>Year of Publication:</b> 2001</p> <p><b>Keywords:</b> Livelihood, Water, Community, Poverty</p> <p><b>Abstract:</b> In recent years watershed management has increasingly become the focal point for poverty alleviation and drought mitigation particularly in rainfed areas of India. The article has attempted to examine the watershed approach in detail, both at the field/ground level as well as at the policy level and make suggestions for its adoption as a viable option for meeting the livelihood needs of the focus group, especially the vulnerable communities.</p> <p><b>URL:</b> <a href="https://www.devalt.org/newsletter/apr01/of_2.htm">https://www.devalt.org/newsletter/apr01/of_2.htm</a></p>
	<p><b>Title:</b> Some Thoughts on Sustainable Water Resource Management</p> <p><b>Author:</b> H C Srivastava</p> <p><b>Year of Publication:</b> 1997</p> <p><b>Keywords:</b> Water, Environment, Technology</p> <p><b>Abstract:</b> Water resource management should not be viewed and practised in isolation - restricted to demand-supply aspect only; rather, it should be integrated management of all correlated environmental and social factors without which no tangible results will be possible irrespective of the technological development.</p> <p><b>URL:</b> <a href="https://www.devalt.org/newsletter/jun97/of_3.htm">https://www.devalt.org/newsletter/jun97/of_3.htm</a></p>

## Audio Visuals

	<p><b>Title:</b> Watershed Management (English)</p> <p><b>Duration:</b> 5:28 mins</p> <p><b>Synopsis:</b> This film showcases the watershed management programmes implemented by DA in the semi-arid and drought-prone region of Bundelkhand in Central India. These programmes have helped prevent soil run-off, regenerate natural vegetation, harvest rainwater and recharge groundwater, creating sustainable livelihoods for rural communities.</p> <p><b>URL:</b> <a href="https://www.youtube.com/watch?v=aVPXm6Gc9JQ">https://www.youtube.com/watch?v=aVPXm6Gc9JQ</a></p>
	<p><b>Title:</b> Watershed (Hindi, Aug 2013)</p> <p><b>Duration:</b> 5:41 mins</p> <p><b>Synopsis:</b> This film showcases the watershed management programmes implemented by DA in the semi-arid and drought-prone region of Bundelkhand in Central India. ### **About Development Alternatives Group**

Development Alternatives (DA) is a premier social enterprise with a global presence in the fields of green economic development, social equity and environmental management. It is credited with numerous technology and delivery system innovations that help create sustainable livelihoods in the developing world. DA focuses on empowering communities through strengthening people's institutions and facilitating their access to basic needs; enabling economic opportunities through skill development for green jobs and enterprise creation; and promoting low carbon pathways for development through natural resource management models and clean technology solutions.
