

# The Fuel Substitute

## TARA Briquetteers

### Areas of application

- Kilns and tandoors in hotels
- Cooking, space heating in homes
- Milk processing, ironing and gold smithe

### Advantages

- Energy efficient combustion and heating
- Utilizes waste biomass like *ipomea* and *lantana*
- Easy to ignite
- Carbon neutral green fuel

**Capital Investment : Rs. 2,00,000**

**Persons Employed : 5 - 6**

**Annual Production : 1,00,000 kg of charcoal briquettes**

TARA Briquetteer offers a clean fuel technology, which converts waste biomass into valuable non-wood charcoal briquettes. The biomass resources suitable for this technology include woody species that grow prolifically on wastelands; *ipomea*, *lantana*, mustard, cotton and arhar residues. This process produces high quality, clean and standardized charcoal briquettes whose gentle smoke can have different flavours; pine, fir & even cowdung.
